Usukh-Erdene Choijamts

Software Engineer · Full-stack Developer · Ulaanbaatar, Mongolia

iikii427@proton.me · +976 8038 3316 · +976 8810 6671 · github.com/Juu316 · Portfolio

Summary

Full-stack developer who builds the parts of a business that have to be right: payments, signed contracts and stock counts. Co-built GTC Mongolia's booking, e-contract and payment system, and built a jewelry shop's online store and admin portal as the sole developer. Pinecone Academy graduate; works on Debian Linux.

Experience

Full-stack Developer — Mon Thai Sino Group LLC (GTC Mongolia), Ulaanbaatar Dec 2025 – Present

- Co-built, in a team of two, the booking, e-contract and payment system behind global-travel.mn and its internal staff console; wrote about 980 of its ~1,270 commits. Led a team of two.
- Wrote a ~1,200-line query layer that exposes Prisma-style calls on Drizzle, so the backend could move from raw SQL to Prisma to Drizzle without rewriting ~70 route modules.
- Built contract signing without an account, from template to signed PDF: expiring links, an audit log, and rate-limited endpoints validated with Zod.
- Built authentication (Better Auth: email, Google sign-in, verification), HiPay invoicing and travel-insurance purchase, and fixed race conditions in pay-first QPay orders.
- Built the customer AI chat assistant, real-time staff–customer chat (Socket.IO) and an Expo mobile app with push notifications.
- Added an Express server in front of the React app for security headers and server-rendered link previews of tour and news pages. The system has 659 Vitest tests.

- Cleaned up the hacked WordPress site of orchuulga.mn, removing an injected mobile redirect from all 56 pages, and moved it alone to prerendered SvelteKit on Railway behind Cloudflare, keeping its URLs and SEO (Apr 2026).

Freelance Developer — Shuren Goyol jewelry shop, Ulaanbaatar Aug 2026 – Oct 2026

- Built shuren.mn alone: a storefront (19 pages) and admin portal (26 pages) as two SvelteKit apps on Cloudflare Workers sharing one D1 database and R2 image bucket.
- Kept stock as an append-only ledger with a single conditional insert per sale, so two shoppers can never buy the last item.
- Integrated QPay and bank-app payments through Wire, with every confirmation path re-checked against the provider and idempotency keys on every request.
- Added a cron Worker for expiring unpaid orders and scheduled gift cards, and fixed my own security review's findings (SVG uploads, image-proxy headers). 262 test cases (Vitest, Playwright).

Intern — IT Park, Ulaanbaatar May 2024 – Jun 2024

Skills

Frontend	TypeScript, HTML/CSS, Svelte 5 / SvelteKit, React 19, Next.js, Tailwind CSS, Vite
Backend	Node.js, Express, Java, Spring Boot, Go, Better Auth, Socket.IO, Zod
Data	PostgreSQL, MongoDB, SQLite / Cloudflare D1, Drizzle ORM
Infrastructure	Cloudflare Workers, D1, R2; Railway
Payments	QPay, HiPay, Wire
Testing	Vitest, Playwright
Tools	Git/GitHub, Linux, Anthropic Claude
